

BLG CENTER Validation — Progress Summary (June 2026)

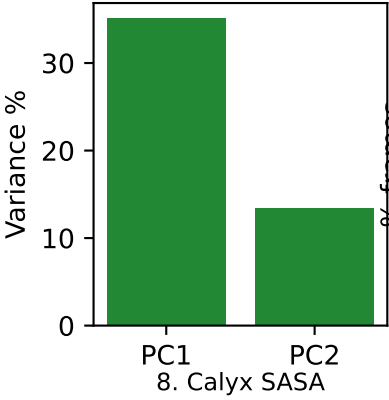

1. HBond counts, CENTER (1000 ns)

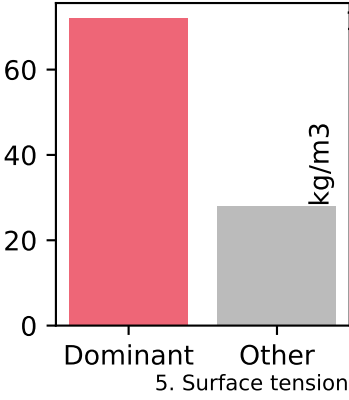

4. DSSP

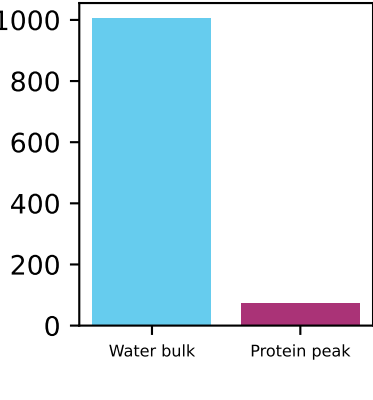

2. PCA

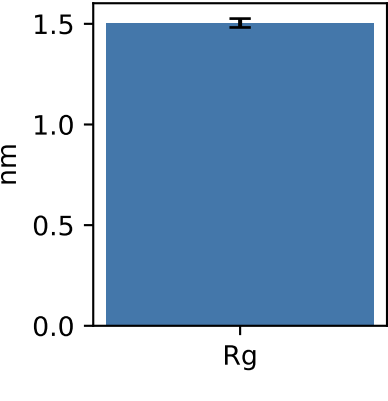

3. Cluster

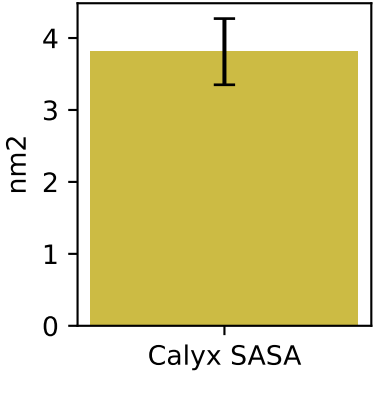

6. Density

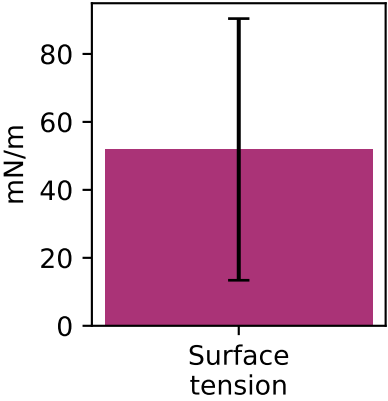

7. Rg

8. Calyx SASA

5. Surface tension

| # | Result                   | Number                                                               |
|---|--------------------------|----------------------------------------------------------------------|
| 1 | HBonds (+ figure)        | prot-prot 589±25, prot-water 40,831±120, interface H2O-H2O 9,540±328 |
| 2 | PCA (structural)         | PC1 35.1%, PC2 13.4%                                                 |
| 3 | Cluster (contact frames) | 1 dominant cluster, 220/304 frames (72%)                             |
| 4 | DSSP                     | Helix 11.8% / Sheet 36.7% / Coil 51.5%                               |
| 5 | Surface tension          | γ = 51.9 ± 38.5 mN/m                                                 |
| 6 | Density profile          | Water bulk 1005 kg/m3, protein peak 72.5 kg/m3 @ z=1.76 nm           |
| 7 | Rg                       | 1.504 ± 0.022 nm (CENTER)                                            |
| 8 | Calyx SASA               | 3.81 ± 0.46 nm2 (CENTER only)                                        |
